Key Insights - Andhra Pradesh Rainfall Intelligence Dashboard

Rainfall analysis for Andhra Pradesh indicates significant spatial and temporal variations during the selected period. The highest single-day rainfall recorded was 188.51 mm, while West Godavari emerged as the district receiving the maximum cumulative rainfall. The wettest month across the selected period was July, reflecting the peak monsoon season.

A total of 12 heavy rainfall events were recorded, highlighting periods of intense precipitation. Overall rainfall patterns indicate that rainfall is concentrated during the monsoon months, with notable differences among districts in terms of rainfall intensity and frequency.

This dashboard enables users to identify rainfall trends, compare district-wise performance, analyze seasonal variations, and detect extreme rainfall events to support data-driven planning and decision-making.
